Deployment options for SAP S/4HANA for SAP Business All-in-One

SAP S/4HANA for SAP Business All-in-One is available either on-premise or hosted through a partner-managed cloud. Both of these options can be purchased and implemented through our global network of SAP Channel Partners.

On-premise

The modular structure of SAP software licenses allows you to license and pay for the number of users that you require at any given time. This means that you can start with what your organization needs today and add more users as your needs change. Please consult the [Licensing SAP Software: A Guide for Buyers](#) for general licensing information, or contact your local SAP account executive for additional licensing and purchasing options.

Partner-managed cloud

The partner-managed cloud deployment option reduces total IT costs by 30% compared to an on-premise deployment. With partner-managed cloud (previously called “managed cloud as a service”), an SAP partner of your choice takes care of deployment, application, and infrastructure management services, as well as ongoing maintenance and support – so you don’t have to worry about IT. All you pay is a single subscription fee that gives you greater control over your operating expenses.

- ✓ Preserve cash and gain more control over your expenses with a subscription-based Opex model
- ✓ Eliminate almost all up-front hardware and software investments
- ✓ Save up to 39% in implementation, improvement, and upgrade costs
- ✓ Rest easy knowing your sensitive business data is safeguarded in a highly secure data center
