MANAGEMENT
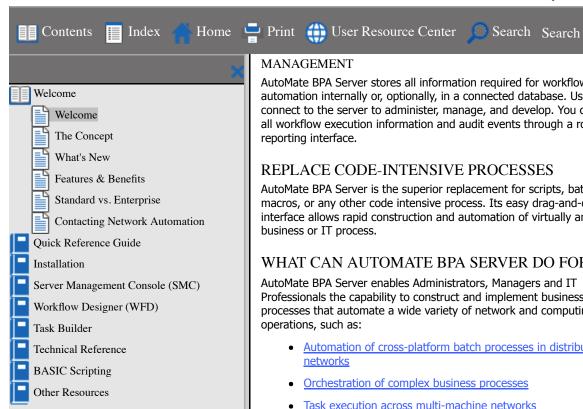

AutoMate BPA Server stores all information required for workflow automation internally or, optionally, in a connected database. Users connect to the server to administer, manage, and develop. You can view all workflow execution information and audit events through a robust reporting interface.

REPLACE CODE-INTENSIVE PROCESSES

AutoMate BPA Server is the superior replacement for scripts, batch files, macros, or any other code intensive process. Its easy drag-and-drop interface allows rapid construction and automation of virtually any business or IT process.

WHAT CAN AUTOMATE BPA SERVER DO FOR ME?
